

Apartment building 'Alte Mühle' renovation Sissach

Object description

#2395

Location	4450 Sissach
Construction	15th century
Object type	Historic building Apartment building
Design type	Energy-efficient renovation

The old, listed mill in Sissach was one of the first historic buildings to undergo energy-efficient renovation in 2012 using the world-first Fixit 222 aerogel high-performance insulating plaster. The finishing plaster was applied using Fixit 203 finishing plaster (with hydraulic lime), thus replicating the original historical finish. This reference project demonstrates that listed building conservation and energy-efficient renovation can go hand in hand – without changing the appearance.

Products

Fixit 222 Aerogel High Performance Insulating Plaster
 Fixit 211 Roughcast mortar with adhesive agent
 Fixit 203 Finish coat with hydraulic lime
 Fixit 223 Special Embedding Mortar
