

Multi-family house interior insulation Küssnacht am Rigi

www.fixit.ch

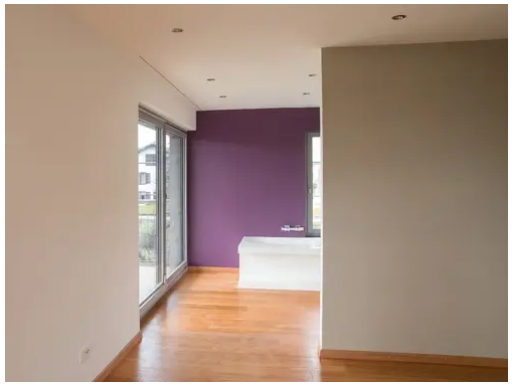

Object description #2431

Location	6403 Küssnacht am Rigi
Construction	1965
Object type	Apartment building
Design type	Energy-efficient renovation

This multi-family house from the 1960s impresses with its architecturally valuable exposed concrete walls. The energy-efficient renovation was therefore carried out in such a way that the aesthetic appearance of the building could be preserved unchanged from the outside. To this end, internal insulation made from Fixit 222 Aerogel high-performance insulating plaster was applied during the renovation. The high insulating performance of this top-quality product allows a very thin layer of only 5 cm of insulating plaster to be applied in order to achieve the desired results.
