

Historic building 'Chesa Palmira' Renovation Bever

Object description

#2435

Location	7502 Bever
Construction	1672
Object type	Historic building Detached house
Design type	Energy-efficient renovation

Chesa Palmira in Bever was built in 1672 and the original floor plan has remained unchanged to this day. The façade of the historic building was already in a relatively dilapidated state. During the renovation, the desire for energy-efficient improvements arose. This was achieved with Fixit 222 Aerogel high-performance insulating plaster – an 8 cm layer was applied to achieve the desired result, leaving the historic appearance virtually unchanged. Fixit 208 base mix for restoration was used as the finishing plaster. The façade was then whitewashed and the sgraffito from 1952 was restored identically.

Products
