

Farmhouse renovation Egg

www.fixit.ch

Object description #2493

Location	8132 Egg
Object type	Apartment building
Design type	Energy-efficient renovation

The former farmhouse in Egg (ZH) underwent energy-efficient renovation. The client wanted to retain the existing jambs, so the plaster was applied using Fixit 222 Aerogel high-performance insulating plaster. In order not to exceed the height of the previous plaster structure, the old base and top coats were removed. The insulating plaster was then applied and embedded with a mesh. A mineral silicate finish (2 mm grain size) was used as the top coat.

Products

Fixit 222 Aerogel High Performance Insulating Plaster
Fixit 211 Roughcast mortar with adhesive agent
